Page Description

HYVE | McCann's Data, Intelligence & Brand Effectiveness Platform.

HYVE enables your brand not only to understand the value of how it is being experienced in culture through social and other platforms, but also to optimise and predict the commercial contributions of future marketing enhancements and how paid, owned and earned activity adds to (or detracts from) the total brand experience: locally, regionally and internationally.

Brand Building Index: We identify how paid, owned and earned activities contribute to the total brand experience ecosystem on 4 axes:

Visibility: evidences how often the brand is generating eyeballs on the brand.

Recall: refers to an audience's ability to decode your brand's message.

Intent: indicates the level of meaningful engagement being established.

Trust: signifies how much time of money audiences are willing to spend with the brand (direct/indirect).
